1:1 mentorship, technical software instruction, and guidance on social and emotional development are the hallmarks of our **Foundation Programming**.

**Foundation Adobe Photoshop and Illustrator**

Imagine a child's own unique interests taking shape through digital painting, illustration, and graphic design. It's possible when they work one-on-one with a professional design mentor online via Zoom over the course of a five-week session. Students will learn new tools as they explore the basics of Adobe Photoshop, Illustrator, or Procreate while they collaborate and create alongside their mentor. The final week culminates with an in-class presentation and celebration of their work. All participants receive a 18” x 24” printed poster of their creation.

**Foundation 3D Modeling**

Now children's creativity can go beyond two dimensions with an introduction to 3D modeling. Students will work 1:1 with a mentor online via Zoom to learn the basics of the craft used in many industries, including gaming, architecture, movie production, engineering, and commercial advertising. The week-long workshop will feature software instruction in Blender with an emphasis on creativity and collaboration alongside their mentor. The final day culminates with an in-class presentation and celebration of their work. All participants will have projects published to SketchFab, the largest online platform for publishing and sourcing 3D models.

*A small sample of the work produced during Foundation Adobe Photoshop and Illustrator workshops in 2020.*
